

# EHR in undergraduate Medical Curricula in Europe: Survey

Many students and healthcare professionals have limited exposure to education on the use of electronic health records (EHRs). This survey aims to assess the status quo of digital health and EHR education among Medical Curricula in Europe from both student and educator perspectives.

This survey is being conducted by the “EHR and eHealth in EU Medical Curricula” working group within Work Package 2 of the Xt-EHR Joint Action. This project is co-funded by the European Union in support of the EU4Health programme and coordinated by National eHealth Authority of Cyprus (NeHA).

The Xt-EHR Joint Action aims to strengthen digital health efforts, specifically cooperation among Member States for creating functional, patient-centred, and interoperable Electronic Health Records, as defined in the European Health Data Space (EHDS) regulation.
