

EU-Funded Projects

EHTEL actively supports and contributes to **strategic EU-funded or co-funded projects** relevant to the deployment of eHealth services in health and social care.

Matteo Melideo of Engineering explains his digital health ideas to colleagues

Over the last 15 years, the association has engaged in **25+ EU-funded projects**, all related to the deployment of eHealth.

EHTEL supports projects by connecting them to **stakeholders external to the consortium**—such as the vast network of EHTEL's doers and shapers.

The association ensures that there is an effective and solid exchange of information by:

- Creating **project visibility** and informing stakeholders on vision, lessons learned, and outcomes;
- **Engaging relevant stakeholders** in interacting with the project (EHTEL Working Groups and Task Forces, standardisation organisations, professional associations...)

- Making the most of the expertise of **EHTEL members** (such as professional, technical, scientific, business) by getting them involved in European projects;

EHTEL also creates **communication, dissemination, and engagement materials**, producing regular **news coverage** and organising **conferences, workshops and webinars**.

This commitment keeps EHTEL's finger on the pulse of eHealth and digital health development, in turn providing **significant insight** to EHTEL's Members and the eHealth and digital health and care communities.

[EU Funded projects: topics of interest](#)

The objective of projects is to innovate, develop new knowledge, gain new experience, or make new knowledge more accessible. EHTEL specifically focuses on two important topics:

- **Digital transformation:** EHTEL actively contributes to projects supporting **digital solutions** to better fit patients' specific needs. It's essential to minimise the gap between the potential offered by digital technologies and their effective implementation in daily patient care.
- **Interoperability:** EHTEL is interested in projects improving **interoperability** to facilitate the exchange of data among healthcare operators. In a world where – in all patient-carer interactions – a large amount of **data** is collected, **good and effective management** of this data is essential for the future of healthcare.

 **Check out all EU-funded project where EHTEL and EHTEL's Members are participating scrolling the top menu on the EHTEL website: “EU Funded projects”**
